Forecast for Thursday 25 Feb 2021

Weather: A dry, largely clear start to Thursday but cloud will tend to build through morning, shrouding the summits at times, but it will remain dry. Cloud lifting and breaking through afternoon to give plenty of sunshine and a dry, mostly clear evening.

Chance of cloud free mountain/hill tops above 800m: Falling 20% for a time this morning rising to 90% in the afternoon.

Visibility: Areas of cloud above around 600m with the odd lower patch will develop through morning bringing fog conditions to the hills before dispersing in the afternoon. Away from cloud good visibility expected.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Note freezing levels around summit level, feeling very cold here in the wind. Be aware of poor visibility through morning.

Forecast for Friday 26 Feb 2021

Weather: Dry with variable cloud amounts through the day with some low level cloud likely early and late. Away from this, skies will often be clear, allowing some lengthy spells of sunshine.

Maximum wind: Southwest 15-20 gusting up to 30mph.

Chance of cloud free mountain/hill tops above 800m: 70%.

Visibility: Some mist of fog may develop in the valleys through morning, and some areas of low cloud likely across the Southern Fells through evening. Otherwise, very good visibility.

Temperature: **Valleys:** 3-5C rising 8 or 9C.
At 800m: Zero rising 2C.
Freezing level: 800m gradually rising well above summits.

Mountain Weather Forecast

Ground Conditions Supplement

Date: Wednesday 24 February 2021. Location: Helvellyn summit at 10:56. Full report: We are continuing to provide the Fell Top Reports for people undertaking their daily local exercise during the lockdown. We would like to remind everyone that Government guidance stipulates that people should only exercise locally, not leaving the village, town or city where they live. Here is today's report:

Another very wet day in the Lakes with Cumbria under a Met Office yellow warning for rain until 20:00 this evening. The ground is saturated and many rivers are in spate with areas of localised flooding across the county. Although relatively snow-free, conditions in the higher fells remain challenging with strong winds and driving rain. What snow remains needs to be treated with care as it tends to be found on steep ground around north and east-facing corrie headwalls. The final section of Swirral edge is a good example, where an area of unavoidable snow needs to be negotiated, from where a slip could result in a long and damaging fall. With overnight summit temperatures forecast to be around freezing tomorrow, the remaining snow could refreeze and microspikes or crampons may be required to negotiate this and similar areas safely. Patches of ice are also still present on the summit plateau and are proving very resistant to the milder temperatures. As a result of the ground being well frozen earlier in the month and subsequently having thawed out, it is now very soft and prone to erosional damage in many places. Please help us to reduce the impact by sticking to footpaths where possible and of course avoiding any unnecessary damage. Despite the milder temperatures, the summit windchill remains below freezing so full winter clothing (waterproofs, extra warm layers, hat and gloves), mountain boots, and additional equipment including a map and compass, headtorch and survival blanket/shelter are all essential for anyone going out onto the fells. Please be conservative with your plans and know your limits. Temperature: plus 3.1 C, Maximum wind speed 33.8 mph, Wind chill: minus 4.8 C, Average wind speed: 27.4 mph
